

Orange Money Bank2Wallet

B2W G4 : Presentation of the B2W

Théo BERARD - Stephane Dery - INNOV/FPS

July 2024

Introduction & context

Bank to Wallet (or “B2W”) is a legacy **add-on of Orange Money** that is interfacing banks and financial partners with Orange Money.

It's role is provide Orange Money customers with the ability to **transfer money between it's Orange Money wallet and it's bank account.**

Like for Orange Money, once the customer is subscribed in the Bank office, the service is

- **100% digital**, available 24/7 on the mobile phone though USSD menus (usually something like “Bank operations”).
- **Executed in real time**, with transaction and money available at any moment (out of “idle” periods of the Bank)
- **Secured and trackable** for Customer, the Bank and the Operator.

Orange is now introducing in production the **G4 release** of the B2W Addon, which is operating money transfers between Orange Money service and **~80 Partners in 11 countries.**

B2W is running a **standardized** architecture and service logic. As a consequence all **Partners and countries will migrate to the G4**, regardless if they are operating or not the new set of features provided by the G4.

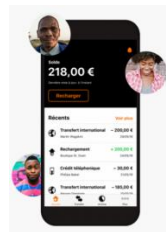

Service features

Features delivered to the Customer :

- **Subscribe** : link it's OM wallet to 1-5 bank accounts*
- Account **balance** : get the bank account balance on the mobile.
- Account **mini statement** : get the statement of the 5 last transactions on the bank account.
- **B2W** : transfer money from bank account to the OM wallet
- **W2B** : transfer money from OM wallet to bank account

Features delivered to the Operator :

- New source of **revenues**
- Interoperability with physical banking networks.
- **Reporting** through “end of day” transaction journal files, and Global Reporting reports.
- **Customer care** : web GUI to get transaction details.

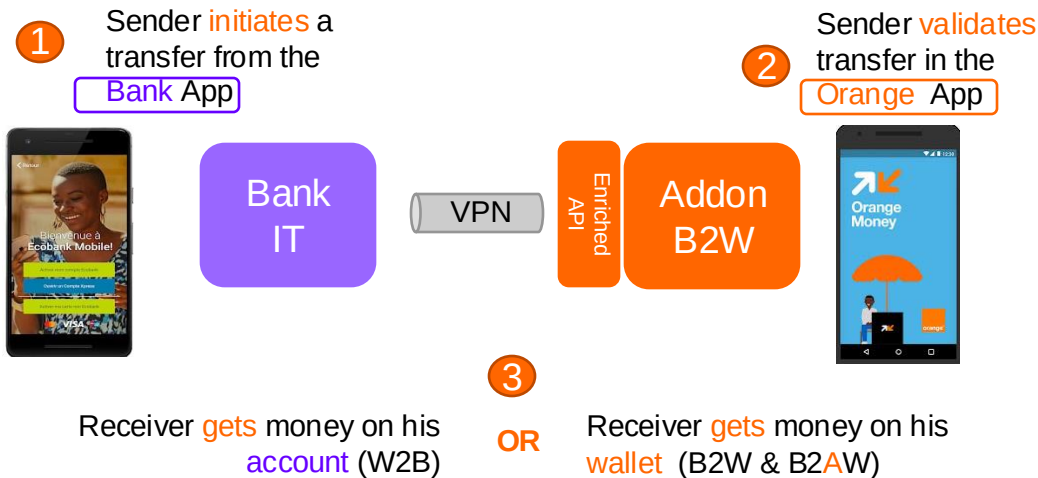

What's new with B2W G4

For Customers

- Bank to **Any** Wallet* : transfer from bank account to any wallet (vs. only the wallet linked to the account in G3). This feature is available **only** from Bank App / Website
- New operation in Orange Money USSD or App menu : **list & confirm pending transfers** initiated from Bank App.

For Partners

- Enriched Orange API** exposed to Bank through the existing VPN for **bank-initiated transfers** (i.e. from the Bank App or Web site) for B2W, W2B & B2AW transfers

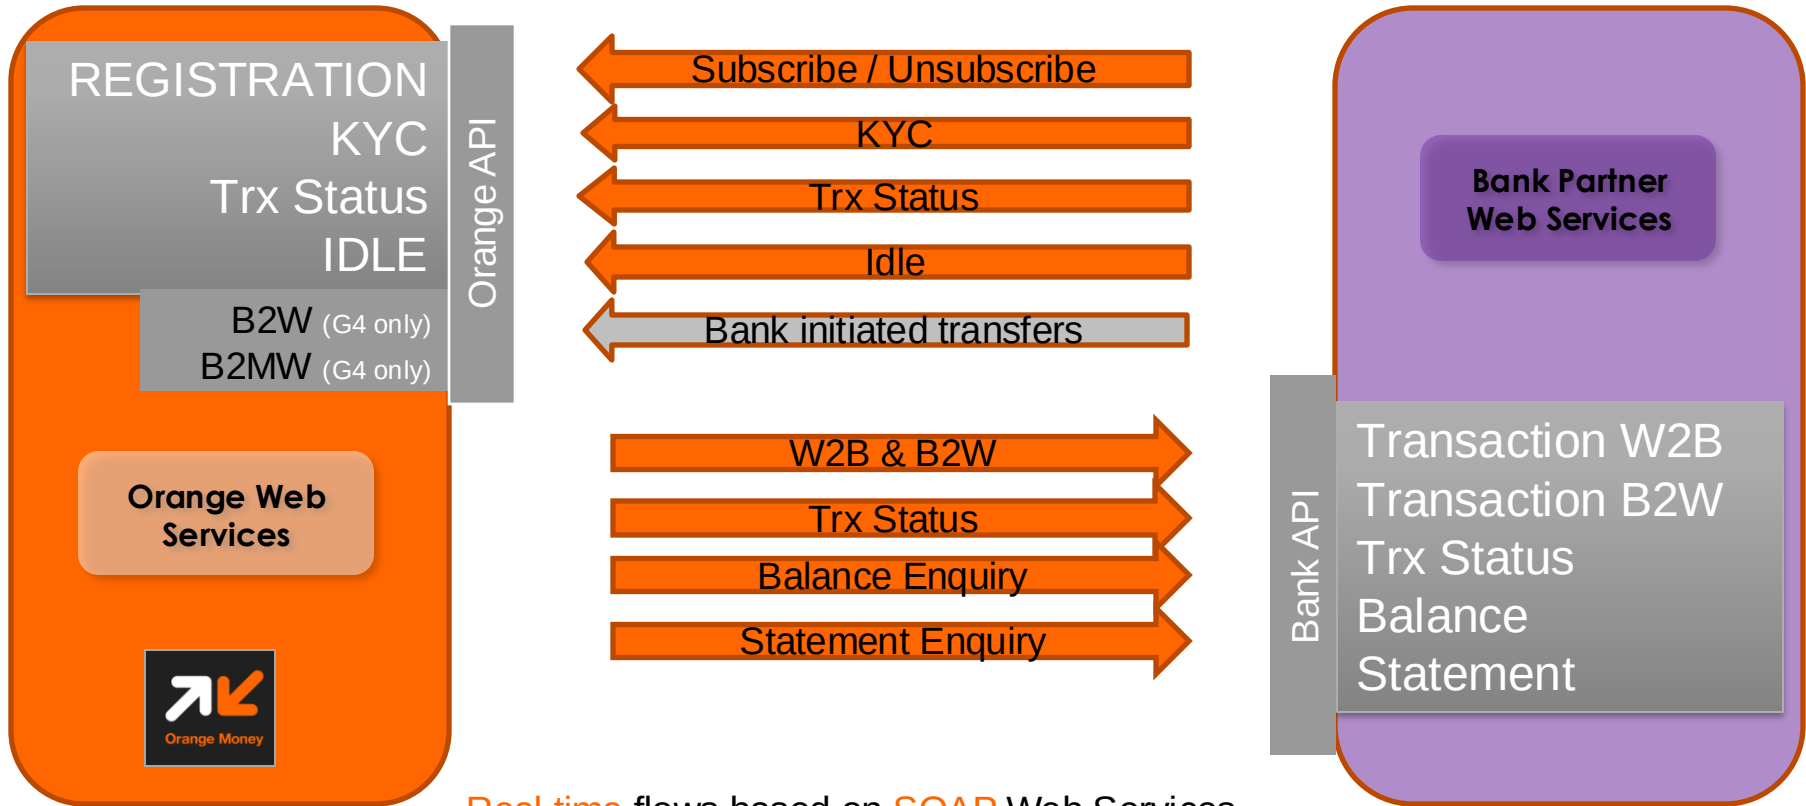

Non-functional :

- Refactoring** of the Addon software using Java (vs. PHP) and Mongo DB (vs. Maria)
- Usage of the “**Transaction correction**” on Orange Money main wallet for refund, decreasing stress on Tango (vs. main -> refund -> initiator wallet transfers in G3)
- ...

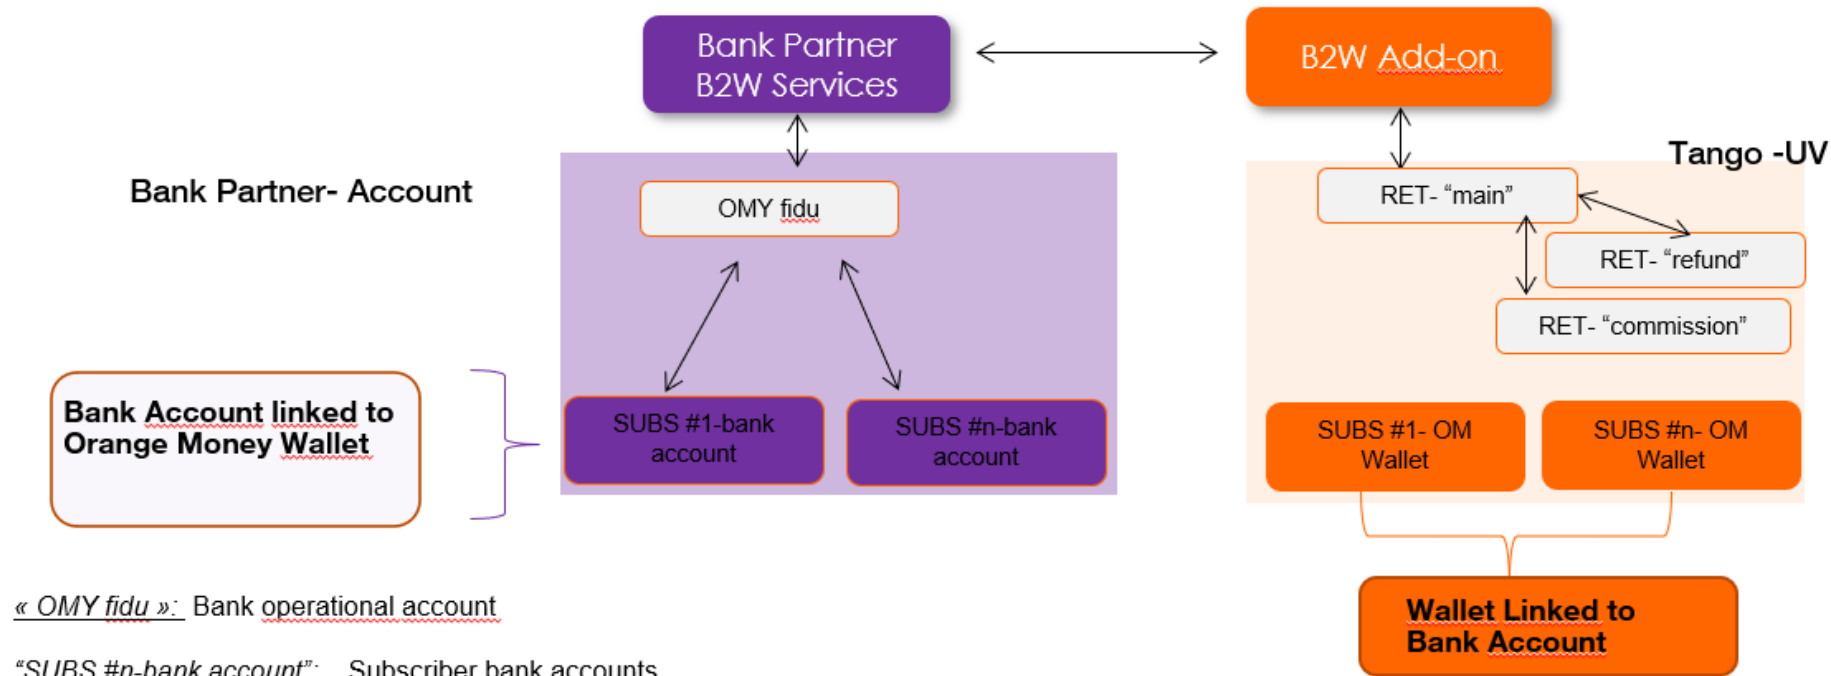

B2W Services Flows & Exposed API

Real time flows based on SOAP Web Services
Standard specifications imposed by Orange

Account description

« OMY fidu »: Bank operational account

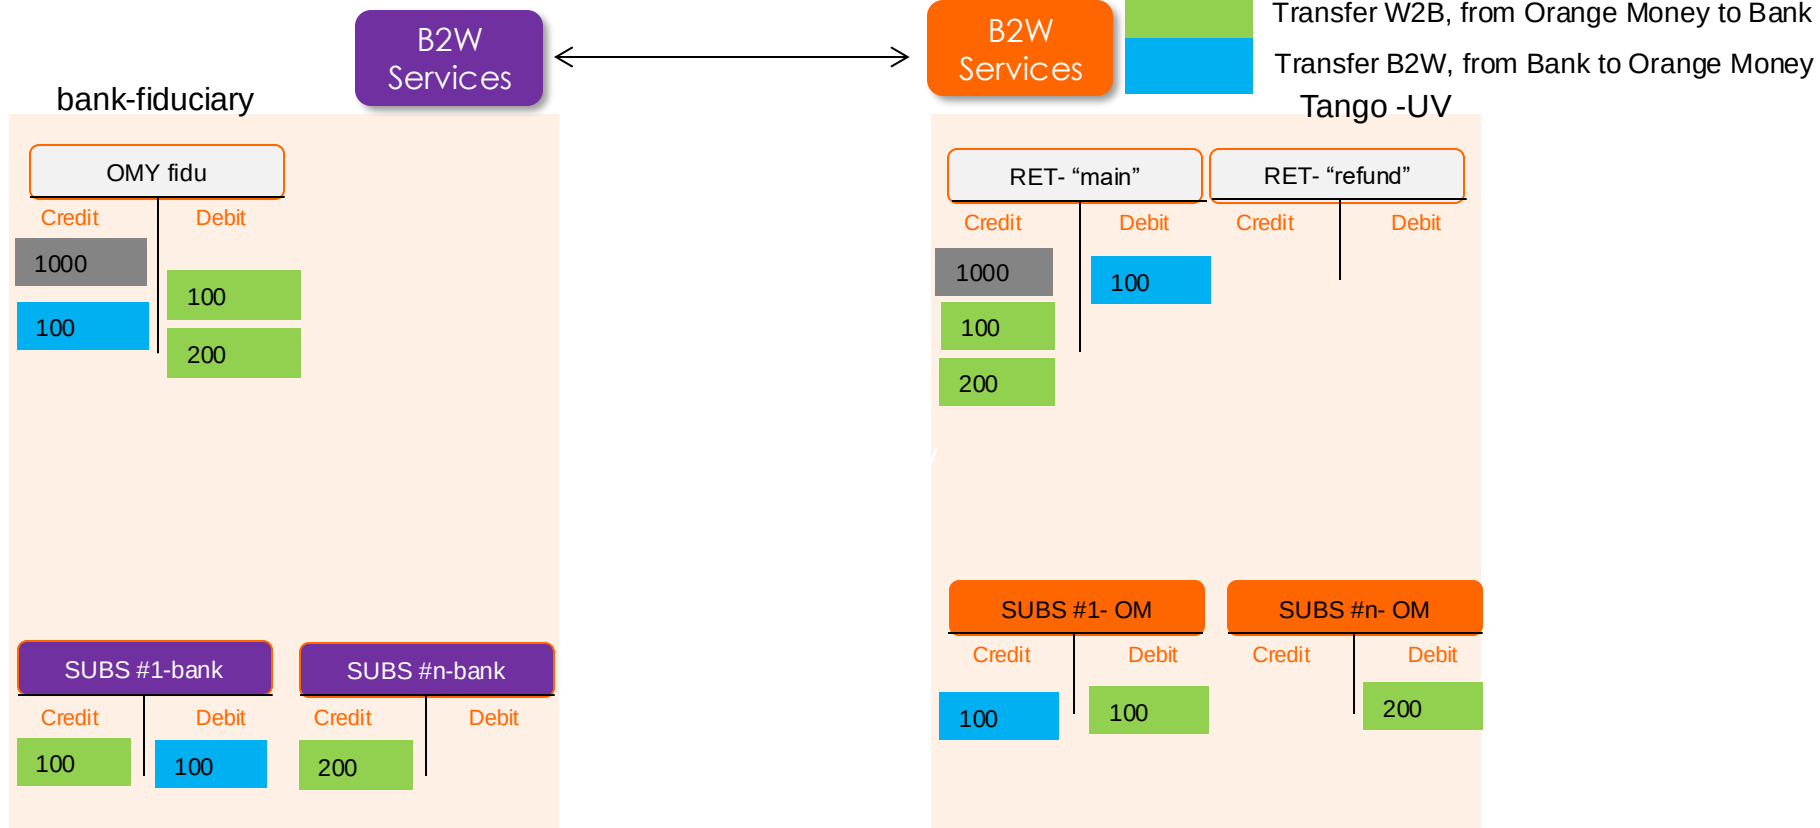

« SUBS #n-bank account »: Subscriber bank accounts

« RET- "main" »: Orange TANGO account that should always have UV for the service to work. Debits and credits from/to Orange Money accounts are managed by this technical account for subscribers that have subscribed to the service

« RET- "refund" »: Automatic reimbursements of subscribers are done thanks to this technical account when a wallet to account transaction fails

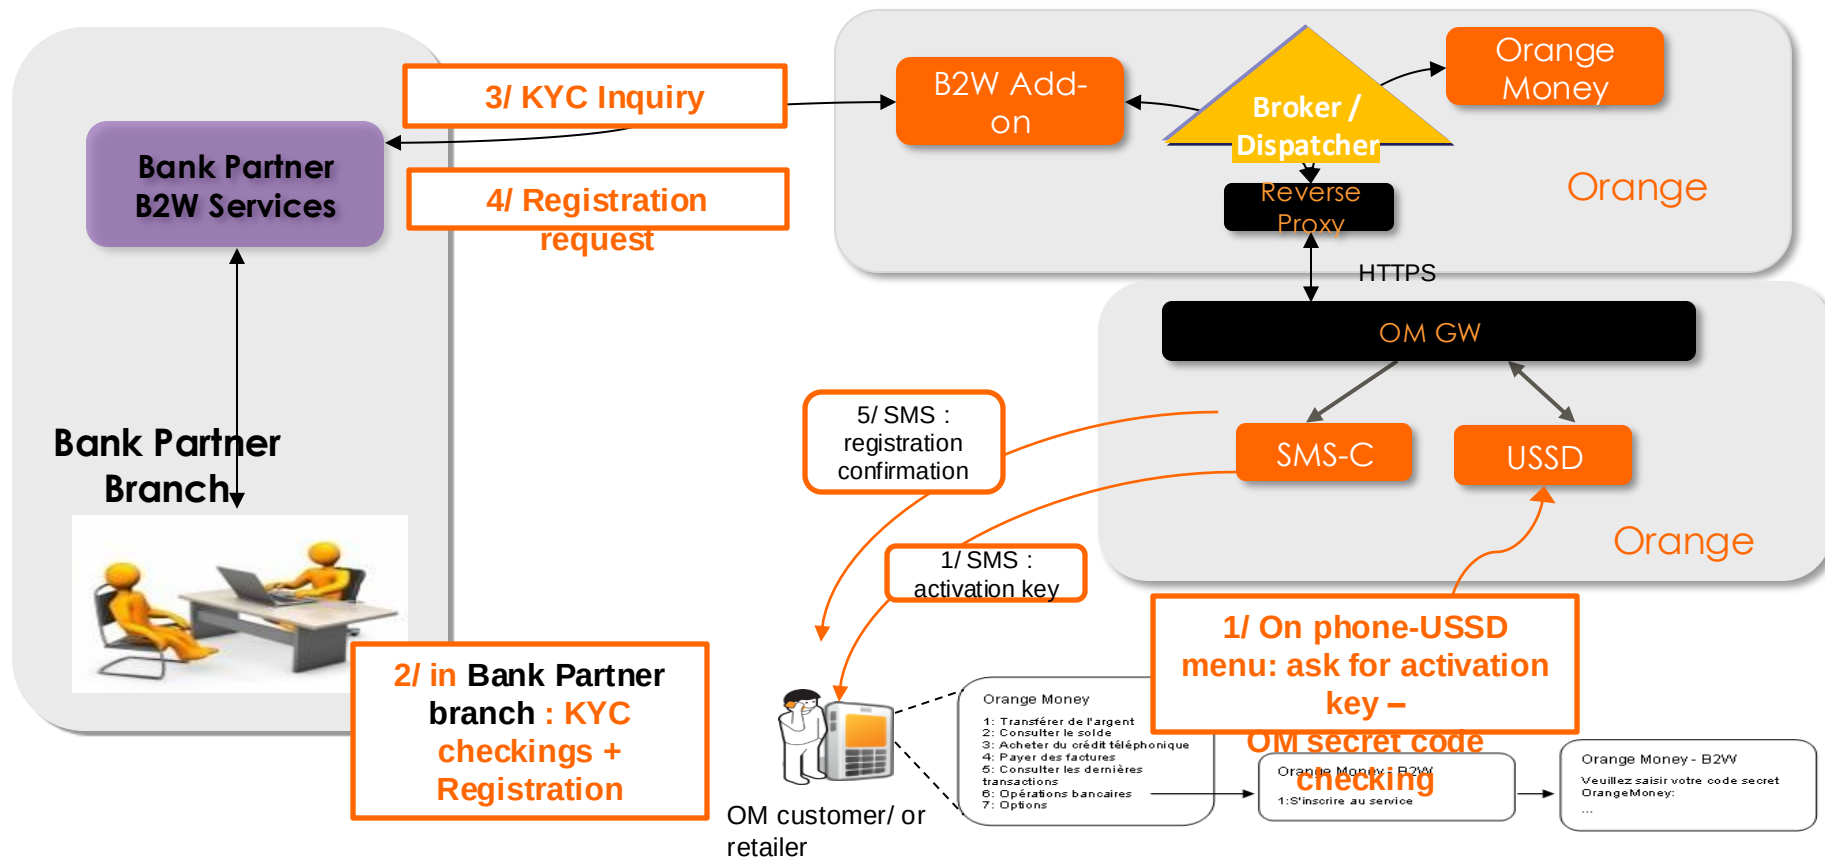

« RET- "commission" »: This account automatically collects commission of transactions

financial flow description

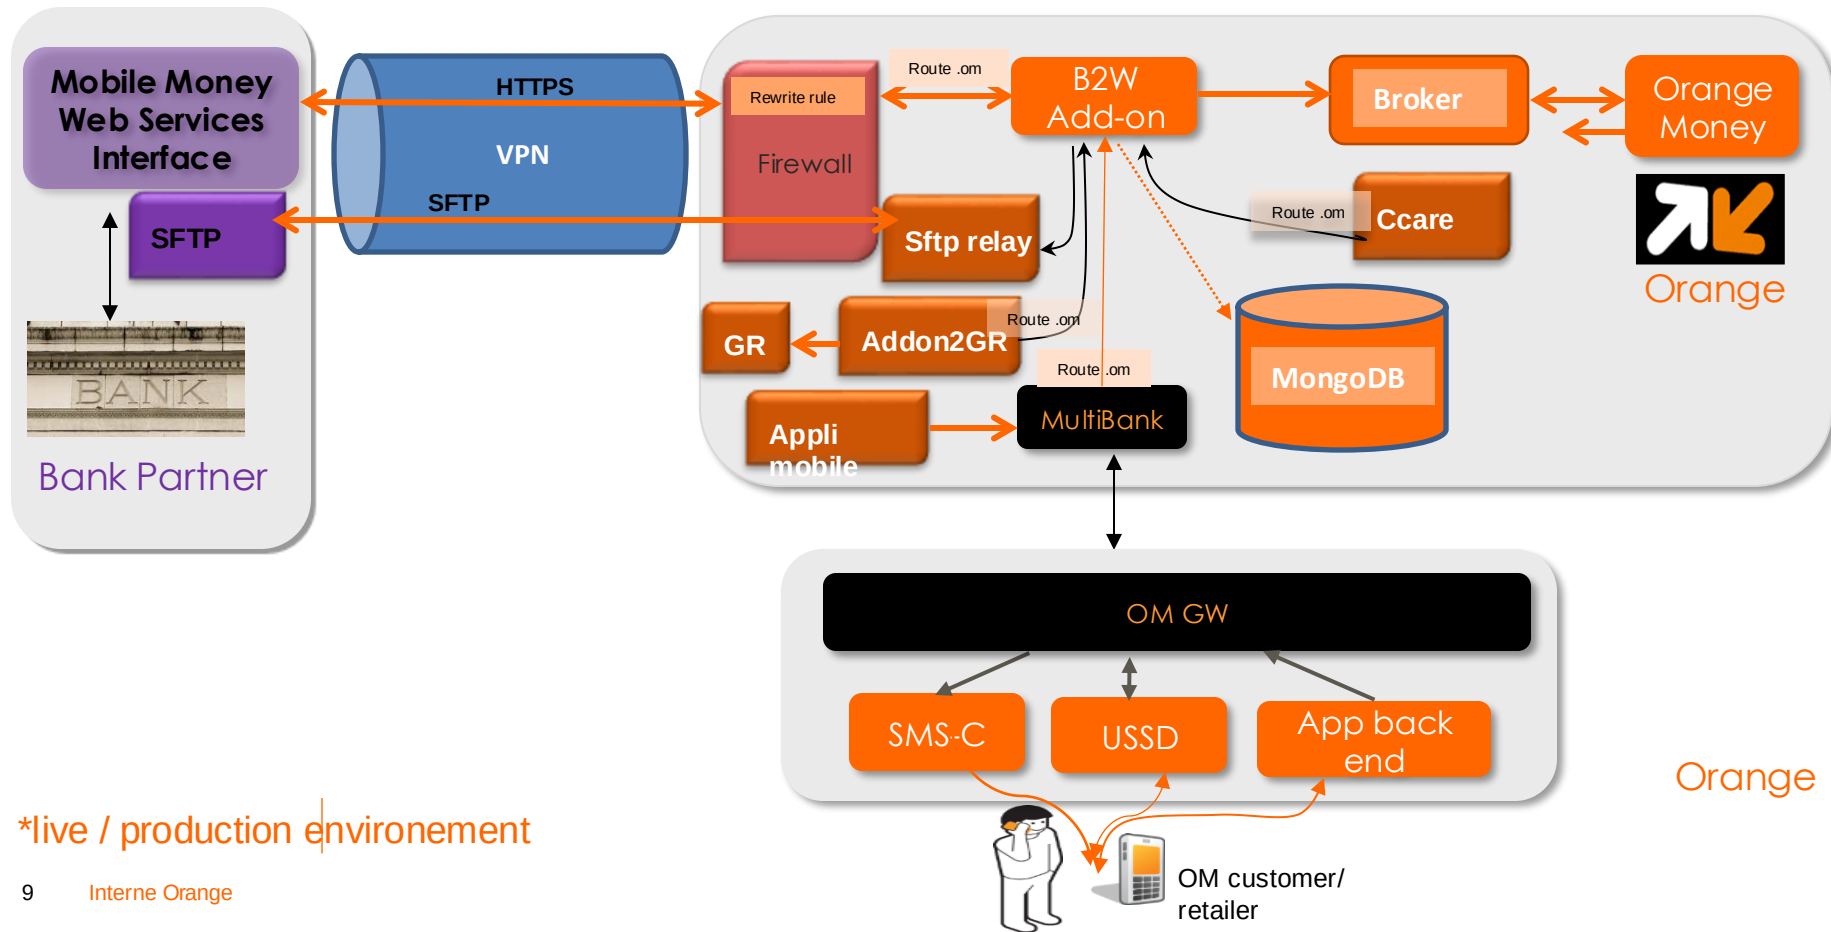

- compensation is done in real time on technical bank account OMY fidu
- An EoD (end of day) file containing all orange transactions done during the day. Bank can use this file for its internal reconciliation.

B2W Registration: In Bank Partner branch

B2W G4 Services - Global Integration Overview*

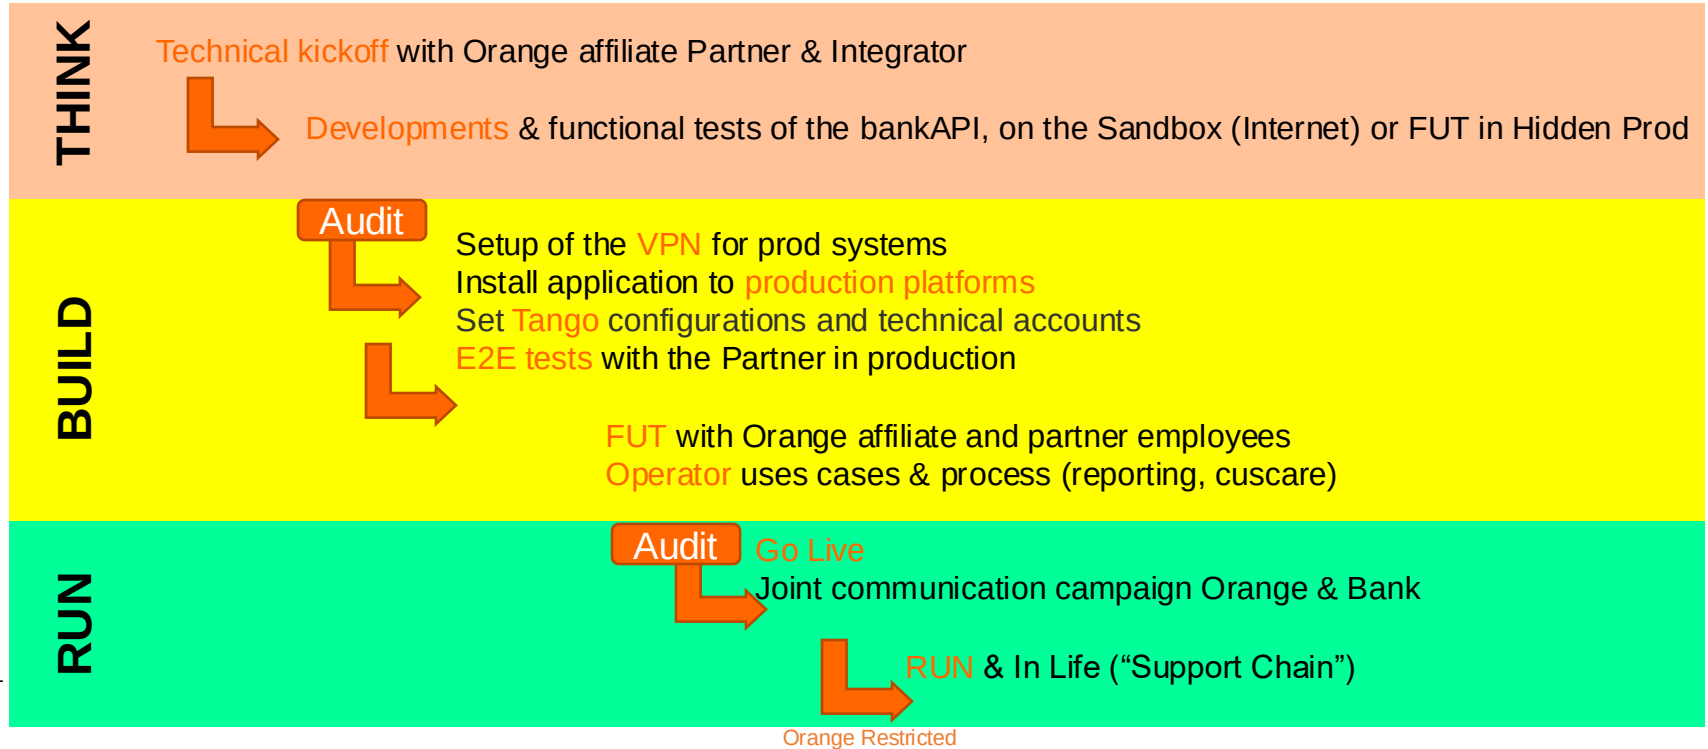

*live / production environnement

B2W Registration functional description

- Customer authentication
 - By OM : OM secret code checking and activation key generation
 - By the bank : KYC checking in agency – KYC Inquiry
- ALIAS generation
 - Unique Id of the link between OM account and bank account
 - Shared between bank and OM
 - ALIAS = IdBank (8 characters- BIC) + Unique_Id (14 characters)
 - Generated by the bank at registration phase
- Many bank accounts can be linked to a single OM account
 - Registration process is performed each time and an ALIAS is generated each time
- Label/Libellé
 - Label used to identify the bank account in USSD menu
 - Chosen by the customer at registration time
- Unsubscription
 - By the customer or by the bank in bank agency
 - By Orange : using CCare. Bank will be informed through EoD file

Partner integration standard process

Integration of Partners to B2W is **standardized and industrialized** on Orange side (OpenShift containers, CI/CD, Pipelines). The **Sandbox** is a major asset to allow autonomous developments on Partner side. It takes usually **4 to 8 months** to roll out new Partners (depending intensity of efforts on Partner side, and maturity of the integrator).

Merci

Thanks

Multumesc
