

Overview for Morocco

Business Purpose

- This document provides technical and business information required to design an application to perform MoneyGram money transfer receive transactions in Morocco.

API Flows and Processes

Receive Transaction Process

- The agent application sends a [referenceNumberRequest](#) containing the transaction reference number, and MoneyGram returns a [referenceNumberResponse](#) containing transaction status and other transaction details.
- [Conditional] Choose one of the following.
 - The agent application sends a [referenceNumberRequest](#) containing the transaction reference number and receive PIN used to verify the receiver, and MoneyGram returns a [referenceNumberResponse](#) confirming the transaction may continue.
 - The agent application validates the PIN locally based on the data returned on the [referenceNumberResponse](#).
- [Conditional] If the transaction is a currency redirect transaction, the agent must tell the consumer the new exchange rate and receive amount, and receive approval before continuing.
- The agent verifies the receiver's name on ID against transaction details.
- The agent application sends a [getFieldsForProductRequest](#), and MoneyGram returns a [getFieldsForProductResponse](#) containing field requirements and screen content information for the transaction.
- A summary screen may be displayed with data collected to be confirmed by the agent or the customer. The agent application sends a [receiveValidationRequest](#) containing information collected from the customer, and MoneyGram returns a [receiveValidationResponse](#) indicating the transaction can continue, or an error indicating the issue with the receive transaction request .
- The agent application sends a [detailLookupRequest](#) and MoneyGram returns a [detailLookupResponse](#) containing the sender information. The agent application performs any necessary screening.
- The agent application sends a [commitTransactionRequest](#) within 3 minutes of the [receiveValidationRequest](#), and MoneyGram returns a [commitTransactionResponse](#).

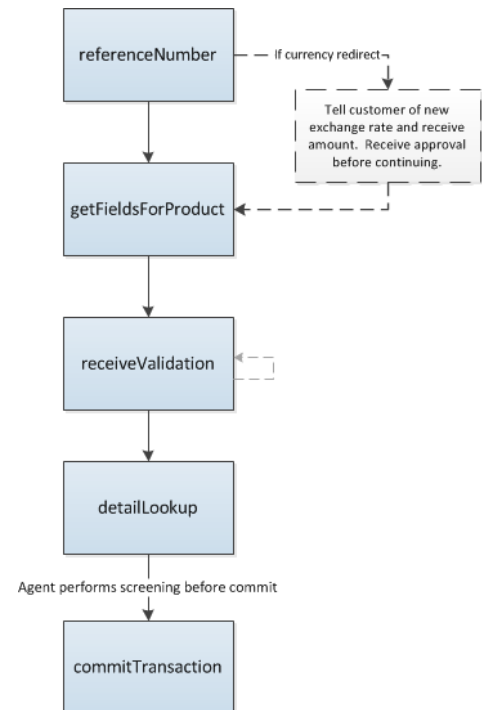

Figure 2: Receive Process Flow

9. If the `commitTransactionResponse` is not received due to communication error, the agent application must resend the `commitTransactionRequest`.
10. After a successful `commitTransaction`, the agent provides the consumer with their money and the transaction receipt.
