

PAPSS Integration

Release Notes

Project Details

Project: PAPSS Outbound & Inbound Technical Services

Environment: Production

Release Type: New Deployment

Prepared By: Kennedy Gatimu

Deployment Method: Azure DevOps CI/CD (On-Prem Target)

Services:

- papss-outbound-technical-service-ms
- papss-inbound-technical-service-ms

Deployment Approach

- Code merged to **main** via Pull Request.
- PR reviewed and approved.
- Azure Pipeline builds and packages artifact.
- Upon approval, deployment is automatically executed to on-prem production server.
- No manual deployment steps.

Pre-Deployment Requirements

The following must be confirmed by Production team before release:

1. Java Runtime

Provide Java 25 absolute path.

Example from UAT:

- **Java Path:** /u01/gag/sw/jdk-25.0.1/bin/java

2. Application Deployment Directories

Production absolute paths must be confirmed.

Example UAT paths:

- **Outbound:** /u01/gag/papss/papss-outbound-technical-service-ms
- **Inbound:** /u01/gag/papss/papss-inbound-technical-service-ms

3. Keystore & Truststore Paths

Production certificate files must exist.

Example UAT paths:

- **Keystore:** /u01/gag/papss/certs/papss_equitygroupholdings_com_uat.jks
- **Truststore:** /u01/gag/papss/certs/truststore-papss-uat.jks

Update the permissions with 600:

```
chmod 600 /u01/gag/papss/certs/papss_equitygroupholdings_com.jks  
chmod 600 /u01/gag/papss/certs/truststore-papss-prod.jks
```

4. Channel Dependency

Required from Channels / OMNI Team:

- Valid Production OMNI **certificate** for payload signature verification.

5. Database Scripts

Production DB scripts will be shared separately

Configuration Management

- Sensitive values stored in Azure KeyVault
- No secrets stored in source control
- mTLS enforced
- Hostname verification enabled
- trust-all disabled
