DEVELOPER API GUIDE DOCUMENT

PROJECT: Equity Pesalink ISO20022 Upgrade

Date: 12.09.2022

THIS DOCUMENT AND THE INFORMATION IN IT ARE PROVIDED IN CONFIDENCE, FOR THE SOLE PURPOSE OF EQUITY BANK LIMITED AND MAY NOT BE DISCLOSED TO ANY THIRD PARTY OR USED FOR ANY OTHER PURPOSE WITHOUT THE EXPRESS WRITTEN PERMISSION OF EQUITY BANK LIMITED.

Any form of reproduction, dissemination, copying, disclosure, modification, distribution and or publication of this material is strictly prohibited. The contents of this document have not been independently verified and they do not purport to be comprehensive, or to contain all the information that a prospective investor may need. No representation, warranty or undertaking, expressed or implied is or will be made or given and no responsibility or liability is or will be accepted by Equity Bank Limited or by any of its directors, employees or advisors in relation to the accuracy or completeness of this document or any other written or oral information made available in connection with the Company.

Delivery Details

This build is available in the form a jar - **pesalink-v-2-gw-0.0.1-SNAPSHOT.jar**

All files included in the build are;

- i. pesalink-v-2-gw-0.0.1-SNAPSHOT.jar
- ii. pl2-gateway.conf
- iii. application-prod.yml
- iv. wrapper
- v. pl2-gateway
- vi. wrapper.jar
- vii. libwrapper.so
- viii. lib folder

Production Property File Update

The production application-prod.yml will be updated as follows;

1. Eureka property

Replace the localhost on the defaultZone, with the production server ip address;

```
eureka:
  instance:
    prefer-ip-address: true
  client:
    service-url:
      defaultZone: http://admin:${jhipster.registry.password}@localhost:8761/eureka/
```

2. Using jasypt online tool, encrypt the database username and password as follows;

Go to URL: <https://www.devglan.com/online-tools/jasypt-online-encryption-decryption>

Jasypt Online Encryption	Jasypt Online Decryption
Enter plain text to Encrypt	Enter the Jasypt Encrypted Text
Enter plain text to hash	Jasypt Encrypted Password
Select Type of Encryption	Select Action Type
One Way Encryption(Without Secret Text) ▾	Decrypt Password ▾
Secret Key To Be Used While Encryption	Secret Key Used during Encryption(Optional)
Enter Secret Key	Enter Secret Key
Encrypt	Match/Decrypt
Encrypted String:	Result:
Result goes here	Result goes here

From the site above

- i. Enter plain text to Encrypt (username, password)
 - ii. Select Two Way Encryption as the Type of Encryption
 - iii. Enter Secret Key To Be Used While Encryption (Here create a secret key)
 - iv. Encrypt the password
3. On the application-prod.yml, update the encrypted database details as follows;
- i. Replace the database name from **pesalinkV2GW** to the production DB name
 - ii. Update the DB username and passwords as below

username: ENC(jasypt-Encrypted-username)

password: ENC(jasypt-Encrypted-password)

```
liquibase:
  contexts: prod
  url: jdbc:sqlserver://sql-omnichannel-preprod-001.privatelink.database.windows.net:1433;database=pesalinkV2GW
mail:
  host: localhost
  port: 25
  username:
  password:
r2dbc:
  url: r2dbc:pool:mssql://sql-omnichannel-preprod-001.privatelink.database.windows.net:1433/pesalinkV2GW
  username: ENC(jasypt-Encrypted-username)
  password: ENC(jasypt-Encrypted-password)
  host: sql-omnichannel-preprod-001.privatelink.database.windows.net
```

- iii. Update the jasypt property with the Secret Key used during Encryption above

```
jasypt:
  encryptor:
    password: h3xzqqc73Tigy84pEiHQPPQap
```

4. If the current server port 8443 is not available, update it with a port number available in production, otherwise leave it as 8443

NOTE: If the port is changed, inform the development team for a code rebuild.

```
server:
  port: 8443
```

5. Update the ipsl certificate credentials - password and alias with production credentials provided by sysadmin team.

```
server:
  port: 8443
  hostname: plink-prod.equitybankgroup.com
  ssl:
    key-store: /u01/gag/plv2/certs/Equity-IPSL/EQUITYBANK_transport.p12
    key-store-password: 1EVi6d2cyO
    key-store-type: PKCS12
    key-alias: equitybanktransport
```

Deploying Production Files

1. Copy Files To Production Paths

Copy the provided files to the below production paths respectively;

- a) `/u01/gag/plv2/gateway/bin/pesalink-v-2-gw-0.0.1-SNAPSHOT.jar`
- b) `/u01/gag/plv2/gateway/bin/wrapper`
- c) `/u01/gag/plv2/gateway/bin/pl2-gateway`
- d) `/u01/gag/plv2/gateway/bin/config/application-prod.yml`
- e) `/u01/gag/plv2/gateway/bin/lib/lib folder`
- f) `/u01/gag/plv2/gateway/conf/pl2-gateway.conf`
- g) `/u01/gag/plv2/gateway/lib/wrapper.jar`
- h) `/u01/gag/plv2/gateway/lib/libwrapper.so`

2. Create environment at /u01/gag - Optional

- a) `cd /u01/gag`
- b) `source j11_env.sh`

3. Update yml file at target location with the supplied prod yml

- a) `cd /u01/gag/plv2/gateway/bin/`
- b) `jar uf pesalink-v-2-gw-0.0.1-SNAPSHOT.jar config/application-prod.yml`

4. Restart services at /u01/gag/imtv2/core/bin

- a) `sudo ./pl2-gateway restart`
