	First Draft		

1.2. Document Purpose

The purpose of this document is to describe how Expanding IMTs will be automated on the system. This will improve the process and efficiency while processing IMTs and settlement with Partners.

1.3. 1.4 Intended Audience.

The intended audiences for this document include but not limited to:

• Business Owners	• System Designers & solution architects
• Project Manager	• Developers
• Quality Assurance	• Compliance team

2. PROJECT SUMMARY

2.1. Project Background

International Money Transfer (IMT) service is a channel used to send & receive funds to & from any beneficiary globally. Equity Bank Kenya processed a little over 8 Billion Kenya shillings worth of international transfers from the period 2018 -2019 through the Swift network.

Whilst the Swift platform has had numerous improvements in security and transaction delivery speeds, there network has its unique challenges. The Swift platform can be credited for being able to handle numerous transactions at a go to nearly all destinations worldwide, it does however have its limitations;

1. High transaction cost precipitated by Correspondent banks
2. Slow Transaction processing speed
3. Cut off times for non-banking holidays, and hours

The average Swift transaction will be processed by a minimum of 2 banks and can sometimes involve as many as 4-5 financial institutions. The ripple effect of these loops translates into higher costs of sending a transaction and delayed

completion of the transactions. Each financial partner will charge a fee, whether fixed or as a percentage of the principal amount being sent which adds to the sending cost. Secondly, foreign currency conversions adds to the total transaction costs. When the initiating currency is different from the receiving currency, the customer does not have control of the exchange rates and even the sending bank is subject to prevailing forex conversions rates set by the parties processing the transaction.

In principle transactions processed via Swift ought to be instant as it is merely a passage of instructions from one bank to another, however the restrictions by regulators, technology and personnel have meant less or no flexibility in processing speeds. An average swift transaction takes 2 working days to get to the intended recipient, and in some cases factoring in Cut off times, bank holidays and non-bank working days some transactions can take as many as 5-7 days.

To the contra wise several Money Transfer Operators are able to offer the same service faster, more affordably while giving the bank more control on how the transactions are processed. The bank, cognizant of the challenges of processing customer transactions to global destinations, aims to leverage on the rails she has established with several of its Money Transfer partners to address these issues and deliver quality service to her clients. The existing MTO networks are robust and efficient to handle the transaction bandwidth at a fraction of the cost and faster payments some being instant depending with the partners.

To this end, the bank will exploit rails created by 3 global switching partners to move money globally alongside the SWIFT Network.

- Master Card Cross Border send
- TransferTo (Thunes Network)
- MFS Africa
- TerraPay

Sending international transfers has for a long time been a tedious and long process that usually involves prior planning in order to meet set deadlines. The existing Swift rails allow for P2P, P2B, B2P and B2B, whilst the existing IMT partners only allow for P2P transactions. The limitations on the product offering coupled with efficiency and cost of processing these transactions, has led business to seek other alternatives in order to increase the options available for both bank and non-bank customers.

The bank is cognizant of existing and potential partners offering P2P, P2B, B2P, and B2B for both outbound and inbound transactions able to process big ticket items, thereby providing options for customers.

The bank will be focusing on using alternative international transfer rails to;

- 1: Reduce cost of sending international transfers
- 2: Increase the speed of international transfer delivery
- 3: Provide a secure, friendly round the clock solution for international transfers
- 4: Increase product offering for International transfers.

2.2. In Scope

Out Bound on APP, STK, BRANCH (OVER THE COUNTER), EAZZYNET and EazzyBiz

P2P (Peers to Peers)

B2P (Business to Person)

B2B (Business to Business)

P2B (Person to Business)

In Bound on APP, STK, BRANCH (OVER THE COUNTER), EAZZYNET

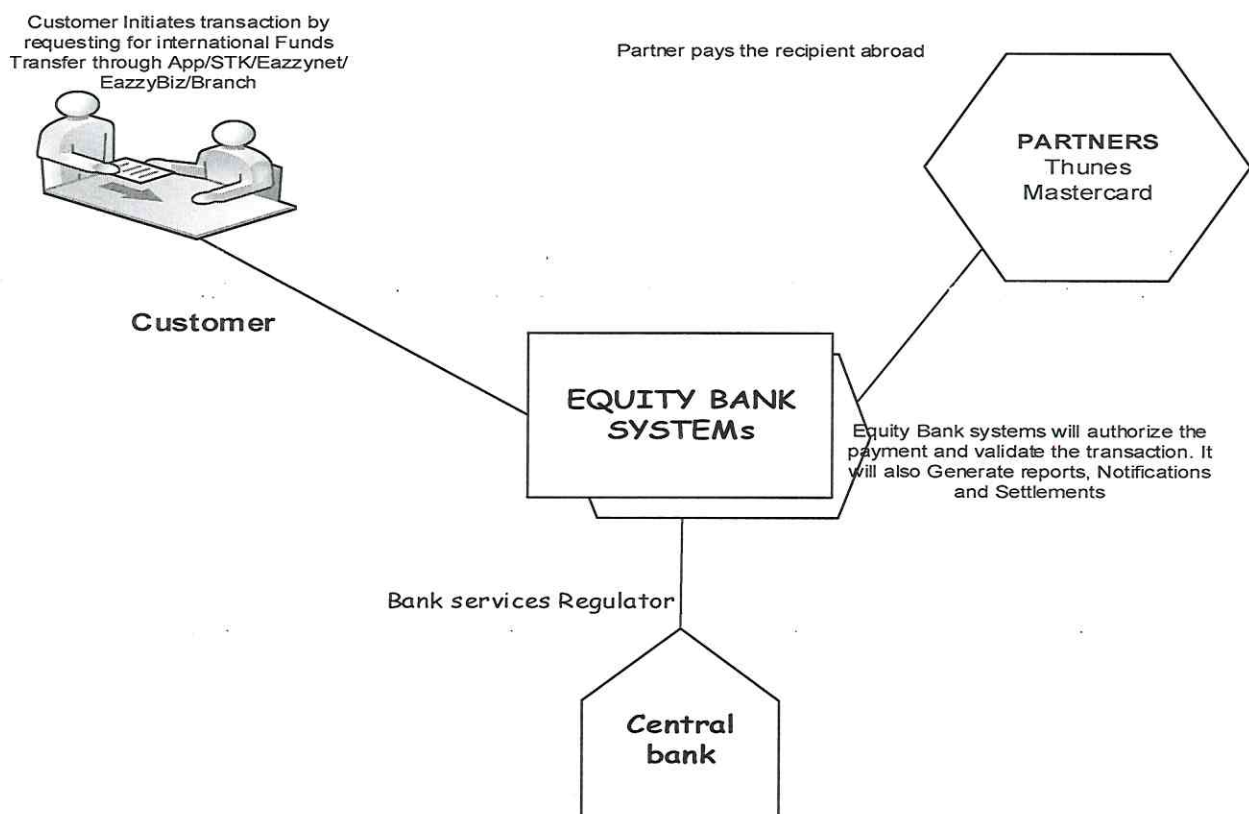

2.3. Out of Scope

- I. Trainings
- II. Commercials
- III. Legal & regulatory

2.4. Assumptions & Constraints

- Central Bank Kenya approval required for this kind of initiative
- Partner systems are on high availability to support Realtime transactions.
- Business requires this to be live by end of September 2019.

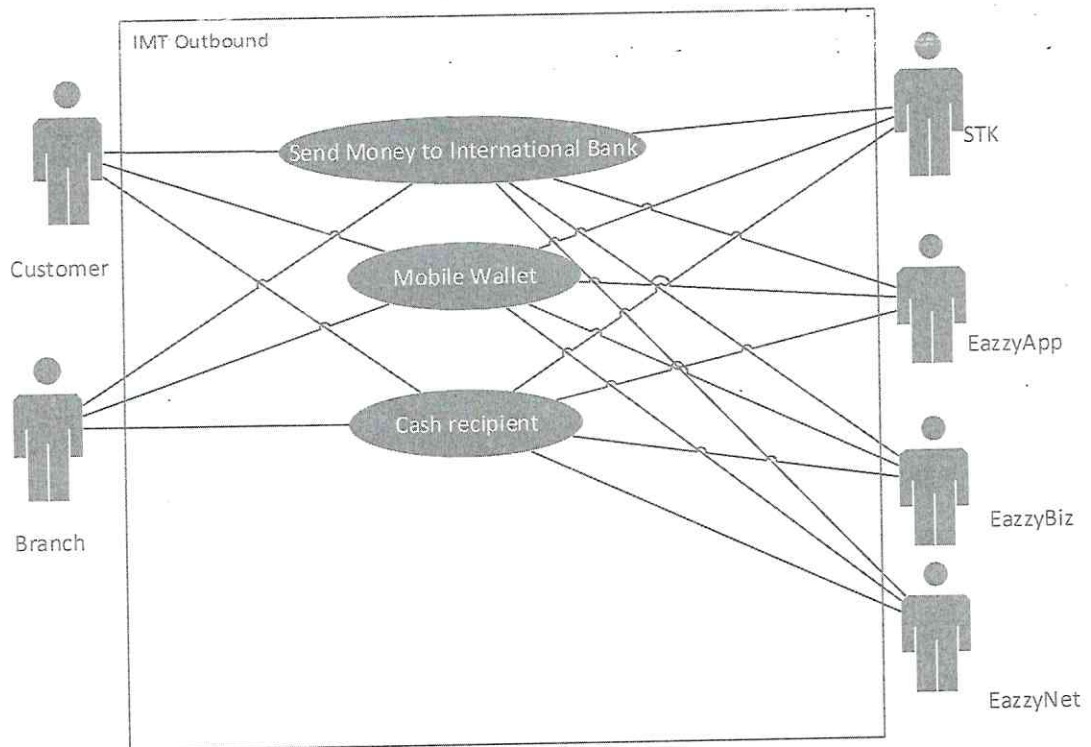

2.5. Business Context Diagram

2.6. Current process overview

This is a new solution hence no current process

2.7. USE CASE MODEL

HIGH LEVEL REQUIREMENTS

BUSINESS REQUIREMENTS DOCUMENT

2.8. High Level Requirements

FR ID.	Source	Description	Priority/ MoSCoW	Change History
FR_1	Business Teams	A customer in Kenya is able to send money to an International Bank, Mobile Wallet or Cash recipient from EazzyNet	High/Must Have	Initial
FR_2	Business Teams	A customer in Kenya is able to send money to an International Bank, Mobile Wallet or Cash recipient from Eazzybiz	High/Must Have	Initial
FR_3	Business Teams	A customer in Kenya is able to send money to an International Bank, Mobile Wallet or Cash recipient from Equitel App	High/Must Have	Initial
FR_4	Business Teams	A customer in Kenya is able to send money to an International Bank, Mobile Wallet or Cash recipient from Equity STK	High/Must Have	Initial
FR_5	Business Teams	A customer in Kenya is able to send money to an International Bank, Mobile Wallet or Cash recipient from any Equity Bank Branch	High/Must Have	Initial
FR_6	Business Teams	Capability for the customer to attach documents	High/Must Have	Initial
FR_7	Business Teams	Notifications; Customer is able to receive notifications on SMS or email for any transaction that he has initiated or received.	High/Must Have	Initial
FR_8	Business Teams	Reports; Transaction reports categorized by - Senders names, senders Accounts, recipient Accounts /mobile number/ Senders name, Amount, Date, Transaction reference, Transaction mode, branch location etc.	High/Must Have	Initial
FR_9	Business Teams	Transaction reversals	High/Must Have	Initial

2.9. User Profile

Category	Computer Experience Level	Existing Computer Skills and Experience	Typing Skills	Application Domain Knowledge	Device Used	Native Language
Partners	intermediate to expert	Broad range of skills and experiences	Good to Excellent	Knowledgeable to Highly trained in the domain.	Desktop Computer, Mobile device	May or may not be an English Speaker
Business Teams	intermediate to expert	Broad range of skills and experiences	Good to Excellent	Highly trained in the domain.	Desktop Computer, Mobile device	English Speaker
IT Operations	Expert	Broad range of skills and experiences	Good to excellent.	Highly trained in the domain.	Mobile Phone Tablet Laptop Computer	English speaker
Equity Bank Systems	Expert	Broad range of skills and experiences	Good to Excellent	Knowledgeable to Highly trained in the domain.	Desktop Computer, Mobile device	May or may not be an English Speaker

2.10. Summary of Business Rules

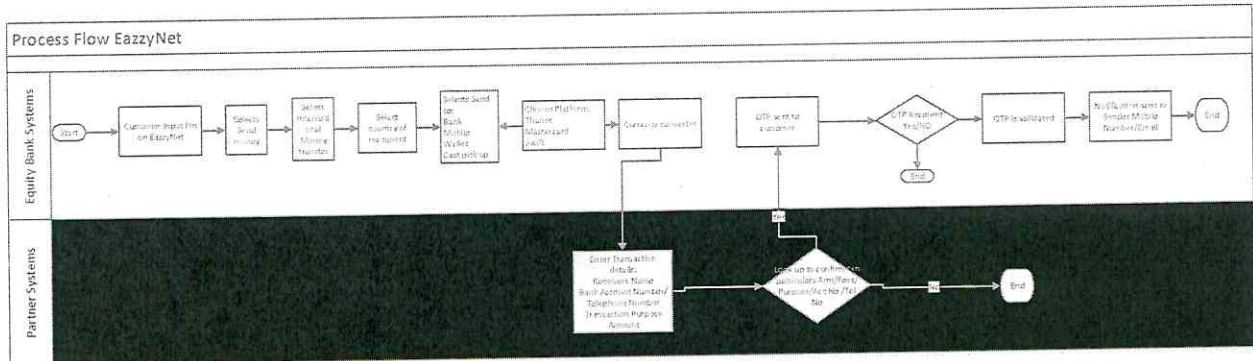

Business Rule Id	Rule Name	Rule Description	Rule Source
BR001	Limitation rule	Message sent/received should meet the SWIFT/IMT standard	Central Bank
BR002	Process rule	Partners should have their message different for both incoming and outgoing.	
BR004	Process rule	Thresholds to be defined as below transactions: 1. High value transactions 2. Mismatch of names and accounts 3. Incorrect recipient details 4. Different currencies 5. Blacklisted accounts	
BR007	Process rule	Fees and commissions will apply as per bank tariff.	
BR008	Process rule	Outbound Failed transactions to be reversed back to Sender Bank	
BR009	Limits rules	Transaction limits will be as Equity Bank as follows: Minimum – Ksh 1 Maximum – Kshs 999 999 There shall be a maker checker process for transaction limit amendments.	

DETAILED FUNCTIONAL REQUIREMENTS

Requirement 01-001	Sending Money to a recipient abroad using the Eazzynet Platform
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Equity Bank customer is sending international money transfer to a recipient abroad through EazzyNet
Preconditions	Customer Must have a password to log into EazzyNet
Termination Outcomes	Condition Affecting Termination Outcomes
Successful	Correct login credentials on Eazzynet Valid recipient details One time password is validated Funds are available in the account
Failure	Invalid login credentials Invalid recipient details One time password invalid Insufficient funds in the customer account
Description of Termination outcome #1	Customer will log in to the Eazzynet system, he will then select send money and select international money transfer from the menu. He will the select country of recipient, then he will select send to: • Bank, • Mobile wallet • Cash pick up Once he selects the send to option he will select his preferred Partner Platform which are: • Thunes • Swift • Mastercard

	Once he selects the partner platform he will be taken to the currency Converter window where he will input the sending amount and the system will populate the rate and the fee that applies for that transaction. The customer will confirm the transaction by checking the following: Receivers name Purpose of sending Amount Fee Once he confirms the recipients details are correct he will receive a one time password on his mobile phone that is registered with the Equity Bank. He will enter the One-time password and Submit. The customer will receive notification with: Transaction reference number Country Name Platform Send/Receive amount Notification Message <i>Confirmed.</i> <i>AED 5000 sent to John Doe, Mashreq Bank Account 014587891. Ref: 78964583 on 02/09/2019 at 10.51. Charge Kes 100</i>
Description of Termination outcome #2	The transaction will end 1. if the customer doesn't have the correct Login details for Eazzynet 2. if the customer has not received the One-time password 3. if the customer does not confirm the recipient details. 4. if the customer has insufficient funds.
Use Case Associations	Customer can only do one transaction at a time
Business Rules	• Access to Eazzynet is through login with a username and password •
Inputs Summary	Name, Amount, Mobile Number, Transaction purpose

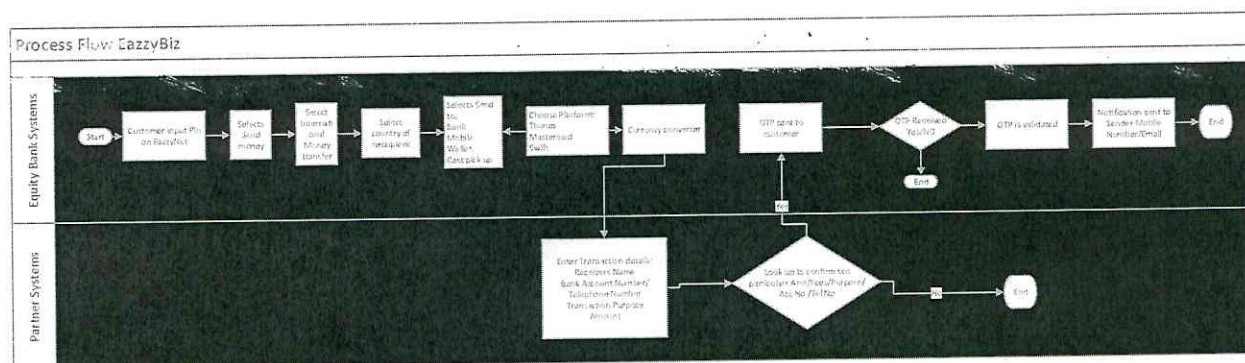

Output Summary	SMS and email notification
Use Case Notes	

Requirement 01-002	Sending Money to a recipient abroad using the Eazzybiz Platform
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Equity Bank customer is sending international money transfer to a recipient abroad through EazzyBiz
Preconditions	Customer Must have a password to log into EazzyBiz
Termination Outcomes	Condition Affecting Termination Outcomes
Successful	Correct login credentials on EazzyBiz Valid recipient details One time password is validated Funds are available in the account
Failure	Invalid login credentials Invalid recipient details One time password invalid Insufficient funds in the customer account
Description of Termination outcome #1	Customer will log in to the Eazzybiz system, he will then select send money and select international money transfer from the menu. He will the select country of recipient, then he will select send to: Bank,

	• Mobile wallet • Cash pick up Once he selects the send to option he will select his preferred Partner Platform which are: • Thunes • Swift • Mastercard Once he selects the partner platform he will be taken to the currency Converter window where he will input the sending amount and the system will populate the rate and the fee that applies for that transaction. The customer will confirm the transaction by checking the following: Receivers name Purpose of sending Amount Fee Once he confirms the recipients details are correct he will receive a one time password on his mobile phone that is registered with the Equity Bank. He will enter the One time password and Submit. The customer will receive notification with: Transaction reference number Country Name Platform Send/Receive amount Notification Message <i>Confirmed.</i> <i>AED 5000 sent to John Doe, Mashreq Bank Account 014587891. Ref: 78964583 on 02/09/2019 at 10.51. Charge Kes 100</i>
Description of Termination outcome #2	The transaction will end 1. if the customer doesn't have the correct Login details for Eazzybiz

	2. if the customer has not received the One-time password 3. if the customer does not confirm the recipient details. 4. if the customer has insufficient funds.
Use Case Associations	Customer can only do one transaction at a time
Business Rules	• Access to Eazzybiz is through login with a username and password •
Inputs Summary	Name, Amount, Mobile Number, Transaction purpose
Output Summary	SMS and email notification
Use Case Notes	

Requirement 01-003	Sending Money to a recipient abroad using the Equity Bank App
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Equity Bank customer is sending international money transfer to a recipient abroad through Equity Bank App
Preconditions	Customer Must have a password to log into Equity Bank App
Termination Outcomes	Condition Affecting Termination Outcomes
Successful	Correct login credentials on Equity Bank App

	Valid recipient details One time password is validated Funds are available in the account
Failure	Invalid login credentials Invalid recipient details One time password invalid Insufficient funds in the customer account
Description of Termination outcome #1	Customer will log in to the Equity Bank App system, he will then select send money and select international money transfer from the menu. He will the select country of recipient, then he will select send to: • Bank, • Mobile wallet • Cash pick up Once he selects the send to option he will select his preferred Partner Platform which are: • Thunes • Swift • Mastercard Once he selects the partner platform he will be taken to the currency Converter window where he will in put the sending amount and the system will populate the rate and the fee that applies for that transaction. The customer will confirm the transaction by checking the following: Receivers name Purpose of sending Amount Fee Once he confirms the recipient's details are correct he will receive a onetime password on his mobile phone that is registered with the Equity Bank. He will enter the One-time password and Submit. The customer will receive notification with: Transaction reference number Country Name Platform

	Send/Receive amount Notification Message <i>Confirmed.</i> <i>AED 5000 sent to John Doe, Mashreq Bank Account 014587891. Ref: 78964583 on 02/09/2019 at 10.51. Charge Kes 100</i>
Description of Termination outcome #2	The transaction will end 1. if the customer doesn't have the correct Login details for Equity Bank App 2. if the customer has not received the One-time password 3. if the customer does not confirm the recipient details. 4. if the customer has insufficient funds.
Use Case Associations	Customer can only do one transaction at a time
Business Rules	• Access to Equity Bank App is through login with a username and password •
Inputs Summary	Name, Amount, Mobile Number, Transaction purpose
Output Summary	SMS and email notification
Use Case Notes	

Requirement 01-004	Sending Money to a recipient abroad using the Equity Bank STK
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Equity Bank customer is sending international money transfer to a recipient abroad through Equity Bank STK
Preconditions	Customer Must have a password to log into Equity Bank STK
Termination Outcomes	Condition Affecting Termination Outcomes
Successful	Correct password credentials on Equity Bank STK Valid recipient details One-time password is validated Funds are available in the account
Failure	Invalid login credentials Invalid recipient details One-time password invalid Insufficient funds in the customer account
Description of Termination outcome #1	Customer will go to the STK menu and select send money, then he will select international money transfer from the menu. He will the select country of recipient, then he will select send to: - Bank, - Mobile wallet

	• Cash pick up Once he selects the send to option he will select his preferred Partner Platform which are: • Thunes • Swift • Mastercard Once he selects the partner platform he will be taken to the currency Converter window where he will in put the sending amount and the system will populate the rate and the fee that applies for that transaction. The customer will confirm the transaction by checking the following: Receivers name Purpose of sending Amount Fee Once he confirms the recipient's details are correct he will receive a onetime password on his mobile phone that is registered with the Equity Bank. He will enter the One-time password and Submit. The customer will receive notification with: Transaction reference number Country Name Platform Send/Receive amount Notification Message <i>Confirmed.</i> <i>AED 5000 sent to John Doe, Mashreq Bank Account 014587891. Ref: 78964583 on 02/09/2019 at 10.51. Charge Kes 100</i>
Description of Termination outcome #2	The transaction will end 1. if the customer doesn't have the correct password for Equity Bank STK

	- if the customer has not received the One-time password - if the customer does not confirm the recipient details. - if the customer has insufficient funds.
Use Case Associations	Customer can only do one transaction at a time
Business Rules	- Correct Password for the Equity Bank STK
Inputs Summary	Name, Amount, Mobile Number, Transaction purpose
Output Summary	SMS and email notification
Use Case Notes	

Requirement 01-005	Sending money from a Equity Bank Kenya Branch to a recipient abroad to receive through the International Bank, Mobile Wallet or Cash Pick up.
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Customer in Kenya is able to send money to an International Bank, Mobile Wallet or Cash recipient from any Equity Bank Branch
Preconditions	Customer must have funds in his Equity Bank account Equity Bank account must be active
Termination Outcomes	Condition Affecting Termination Outcomes

Successful	Valid recipient details Funds are available in the account
Failure	Invalid recipient details Insufficient funds in the customer account
Description of Termination outcome #1	Customer will visit any Equity Bank branch and fill in an international Money transfer form for either the following; • Thunes • Swift • Mastercard The form will have the recipient details which will be filled in correctly by in putting the following; Receivers name Purpose of sending Amount Fee He will sign the form and give it to the teller who will initiate the transaction and issue a receipt with the following details; Transaction reference number Country Name Platform Send/Receive amount The customer will also receive notification on his Mobile phone/Email Notification Message <i>Confirmed.</i> <i>AED 5000 sent to John Doe, Mashreq Bank Account 014587891. Ref: 78964583 on 02/09/2019 at 10.51. Charge Kes 100</i>
Description of Termination outcome #2	The transaction will end 1. if the customer has insufficient funds

	2. if the recipient details are incorrect
Use Case Associations	Customer can only do one transaction at a time
Business Rules	Customer must have ID
Inputs Summary	Name, Amount, Mobile Number, Transaction purpose
Output Summary	Cashiers receipt, SMS and email notification
Use Case Notes	

Requirement 01-005	Settlement process for Equity Bank and the Partners
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Settlement reconciliation for both Funded and Non-Funded Accounts
Preconditions	Equity Bank Partner USD Accounts must have Sufficient Funds
Termination Outcomes	Condition Affecting Termination Outcomes
Successful	Valid recipient details Funds are available in the account
Failure	Invalid recipient details Insufficient funds in the customer account System Failures
Description of Termination outcome #1	<u>Funded and Non-Funded Accounts Settlement Transaction type and Associated Charges:</u> Whenever there is a Customer Debit for the International Money Transfers, the following transaction and associated charge are raised: • Debit Party: Customer Account • Credit Party: Equity Bank Partner USD Account • Amount: Transaction Amount A configurable tariff can be applied which will define the charges on each of the Partners as formulated in the business rules;

	• Debit Party: Customer Account • Credit Party: Equity Bank commissions/Fees Received Account • Amount: Transaction Amount (Fees/Charges) Settlement between Equity Bank and the Partners will be done through Swift Transfers: • Debit Party: Equity Bank Partner USD Account • Credit Party: Partner Account (USD) • Amount: Transaction Amount
Description of Termination outcome #2	In case there is insufficient Funds in the Equity Bank Partner USD Account or the System failures the system will respond with an appropriate failure response
Use Case Associations	
Business Rules	Non-Funded Account must always have sufficient Funds
Inputs Summary	Amounts, Transaction details
Output Summary	Success/Failure notifications.
Use Case Notes	

Requirement 01-007	Reversing a transaction
Actors	Equity Bank Customer, Equity Bank Systems and Partner
Requirement Overview	Equity Bank customer wants to reverse a transaction
Preconditions	Customer must have the transaction reference number
Termination Outcomes	Condition Affecting Termination Outcomes
Successful	Correct reference Number

Failure	Invalid reference number
Description of Termination outcome #1	EAZZYAPP/EAZZYNET/EAZZYBIZ The customer will send an email request to moneytransfers@equitybank.co.ke requesting the bank to reverse the transaction and he will indicate the transaction reference number on the email. The IMT team will receive the instructions and reach out to the customer to verify transaction request. If all checks out the IMT team will reach out to the partner for a transaction reversal (email request) if successfully reversed, the partner will notify the bank and the bank will further notify the customer. Over the counter (Branch) Customer walks in and visits the customer service desk. The branch representative requests the customer to fill a form to reverse the transaction. The customer will indicate the transaction reference number, amount and recipient details on the form. The Branch rep write to moneytransfers@equitybank.co.ke requesting the team to initiate a reversal request to the partner. Once the partner provides the reversal the funds are credited to the customer account.
Description of Termination outcome #2	The reversal will not be successful; 1. if the customer doesn't have the correct reference number 2. if the details initially provided were correct
Use Case Associations	Customer can only reverse one transaction at a time
Business Rules	• Customer must have a reference number • Customer must confirm reversal details
Inputs Summary	Reference Number
Output Summary	SMS and email notification
Use Case Notes

4. NON FUNCTIONAL REQUIREMENTS

Item	Description	Action Item
Database Admin & Monitoring	Database events will be monitored including Inserts, Updates, Deletion and Select	To achieve this, the proposed system database will be integrated with the core banking system, and other relevant systems as required.
File Integrity	Integrity of data stored, processed, and transmitted will be maintained.	This shall be achieved by integrating the proposed system to a data integration system.
Central log management	All servers and application logs will be forwarded the Central Log Management.	This will be enforced through integration with information security system. Minimum audit logs will be enabled on source systems by making sure that user cases are defined within the IS system as per system operations
User management	User Management will be maintained as per IT policy including user provisioning and de-provisioning process.	Users will log in the partners portal as per their IT policy
Password and secure keys	User and systems passwords will be aligned with IT policy.	Passwords will not be cached, stored, or autocompleted in web browsers. The proposed system shall enforce encryption keys policy securely as per the IT policy.
System Integration	Internal and external systems integration will be done through secure ports.	The proposed system will securely be integrated, run on a hardened server as per bank MBS and proper API management observed certificate shall also be configured securely.
Security Assessment	The proposed system shall be assessed on Vulnerability Assessment and Penetration Testing. (VA and Penetration test shall be conducted)	Vulnerability and Penetration test shall be conducted on the system to be developed
Session Management	The proposed system will ensure authenticated users have a robust and cryptographically secure association with their session.	Tests will be conducted to ensure the new system have a robust and cryptographically secure association with their session.

Error handling, Audit and Logging.	The application will handle its own application errors. Will not display sensitive, debug or stack trace information in the production environment.	Assessments will be conducted to ensure the system will not display sensitive, debug or stack trace information in the production environment.
File Management	Authentication will be required before file uploads. The system will conform to file management policies of the bank.	The system will conform to file management policies of the bank.
Communication Security	When transmitting sensitive information, at any tier of the application or network architecture, encryption-in-transit will be used.	Data encryption tests will be carried out to confirm all sensitive information is encrypted
Availability	>The system shall be available 24 hours, 7 days a week to handle transactions that will be initiated from the various integrated systems. Minimal down time for regular maintenance, Backup and >Recovery process is allowed during evening hours (preferably after 12AM) when activity is minimal, nonetheless the customer should be notified of the downtime and that something is being done to restore operations as soon as possible. Minimal activity is expected daily between 10PM and 5AM. >System to system timeouts or errors to be subject to a configured number of retries. System handshake timeouts or errors not resolved within configured number of retries to have systems alerts and escalations raised automatically	24/7 System uptime monitoring will be done and any system issues raised documented and escalated as per existing bank processes
Scalability	The payment gateway need to accommodate current and future transaction volumes. The platform will be designed in a way that it can accommodate the growing number of users in terms of hardware, software, applications and network without slowing down its operations.	The developed system will be simulated to assess if it can accommodate future business growth

Capacity & Performance	>The architecture will provide the ability to record and monitor the performance and utilization of resources within the overall system. It is expected that the environment will be managed through an overall quality process that includes the analysis of performance and availability results. The architecture needs to support the extraction and analysis of this information. >The architecture will allow for integration into a Software Code/Data Distribution solution. This will include the ability to apply changes at the component and data level	The architecture should be integrated into a Software Code/Data Distribution solution. This will include the ability to apply changes at the component and data level
Event Notification	They should be simple to use with easy configuration. The architecture needs to provide standardized services for general event creation and notification	All Alerts and messages will be displayed in simple non-technical language that users can understand.
Confidentiality:	The system must ensure that sensitive data are not disclosed to the wrong persons at the user interface and application level. Minimum security standards shall apply	Minimum security standards shall be applied
Registration Service monitoring	A dashboard to monitor transaction Data Exchange	Build a dashboard to monitor transaction Data Exchange Dashboard should have success or failure, timestamp, notification success or failure

Use Case Associations	
Business Rules	Non-Funded Account must always have sufficient Funds
Inputs Summary	Amounts, Transaction details
Output Summary	Success/Failure notifications.
Use Case Notes
