Version, Build & Deployment

This version will be maintained under Azure DevOps (Version Control Repository). The new version will be on branch name: release-prod-1.1.

Production ready source code will be in the specified release version.

Deployment Instructions

Modifying the Database

Run the 'imtv2-outbound-1.1.sql' on the production database

Deploying the Archive Files

1. In case JAR files are not provided, do the following actions else, skip to step 2:
 - a. Clone the source code from the repository:
'https://dev.azure.com/mcas.ms/ICT-DevOps/Transaction-Processors-GAG/_git/imtv2-outbound-core' into your computer and checkout to the branch 'release-prod-1.1'
 - b. On the root folder where the 'POM.xml' file is located and build the application by running the *Maven* command "mvn install -X -DskipTests," this action will build an archive file named "imtv2-outbound-core-0.0.1-SNAPSHOT.jar"
 - c. Copy the application JAR file: "imtv2-outbound-core-0.0.1-SNAPSHOT.jar" the 'target' folder in the project directory and move it to the /u01/gag/imtv2/core/bin directory of the production server
 - d. Clone the source code from the repository:
'https://dev.azure.com/mcas.ms/ICT-DevOps/Transaction-Processors-GAG/_git/imtv2-outbound-gateway' into your computer and checkout to the branch 'release-prod-1.1'
 - e. On the root folder where the 'POM.xml' file is located and build the application by running the *Maven* command "mvn install -X -DskipTests," this action will build an archive file named "imtv2-outbound-gateway-0.0.1-SNAPSHOT.jar"
 - f. Copy the application JAR file: "imtv2-outbound-gateway-0.0.1-SNAPSHOT.jar" the 'target' folder in the project directory and move it to the /u01/gag/imtv2/gateway/bin directory of the production server
2. Copy the JAR files and run the applications as follows:
 - a. Copy the application JAR file: "imtv2-outbound-core-0.0.1-SNAPSHOT.jar" the 'target' folder in the project directory and move it to the /u01/gag/imtv2/core/bin directory of the production server
 - b. Copy the application JAR file: "imtv2-outbound-gateway-0.0.1-SNAPSHOT.jar" the 'target' folder in the project directory and move it to the /u01/gag/imtv2/gateway/bin directory of the production server

Starting the Application

In the production servers:

- a. Restart the core application running the command: '/u01/gag/imtv2/core/bin ./imtv2-core restart'
- b. Restart the gateway application running the command: '/u01/gag/imtv2/core/bin ./imtv2-gateway restart'
